Environment of the University Campus  
The design goal is to create an innovative environment continuously transforming in accordance with its seasonal changes as well as establishing a special iconic landscape in order to revitalize a campus environment. Students spend the most of their life on the University Campus. Campus should provide not only academic functions but also vital place such as a town.

Therefore the campus planning should consider many social and marketing factors which blend student life and academic activities, often observed in the most desirable urban community.

Architectural design should merge into environmental diversity as well as archiving their functions.

All the landscape design including grading design of topography, planting design, circulation, parking lots, lighting and signage should be controlled thoroughly in order to unify and harmonize the architecture with the various human activities. Taking care of all these elements all inclusively will maintain all the unified images throughout the campus.

The great collaboration between the architecture and landscape architecture then form the sustainable relationship between the students and nature surrounding them.

The scope of this new landscape design is large, which covers  
① Main Promenade of the main circulation on the University Campus,  
② Approach to the North Entrance and "Romantic Garden" including parking lot and slope,  
③ Stepped Sunken Garden on the south of University Auditorium,  
④ Crescent Garden (backdrop of the University Auditorium),  
⑤ Roof Garden on the 7th floor.  
The other landscape design includes access to the students lounge and roof gardens on 3rd and 4th floor.
